Table of Contents

1.0 Introduction 3
- 1.1 CODE's Goals 3
- 1.2 Overview of this Manual 4
- 1.3 CODE Distribution and Support 4

2.0 Overview of the CODE Language 5
- 2.1 An Example Program 5
- 2.2 CODE Objects Are Actually Templates 9
- 2.3 Other CODE Nodes 11
- 2.4 Translating and Running CODE Programs 12

3.0 Hardware Requirements 13

4.0 The CODE User Interface 14
- 4.1 Drawing Graphs 15
- 4.2 Annotating Graphs Via Forms 16
- 4.3 Specific Operations 18
- 4.4 Online Help 21

5.0 Tutorial Examples 23
- 5.1 TUTORIAL: EXAMPLE 1 23
- 5.2 TUTORIAL EXAMPLE 2 33

6.0 CODE Programming Checklist 42

7.0 Arc Topology Specifications and Firing and Routing Rules 44
- 7.1 Arcs that Bind one UC Node to Another 44
- 7.2 Specification of Arcs between Replicated UC Nodes, an Example 45
- 7.3 General Specification of Arcs between Replicated UC Nodes 47

8.0 Call Nodes and Hierarchical Structuring 49
- 8.1 Creating a Graph 49
- 8.2 Calling a Graph 50

9.0 Name Sharing Relations 54

10.0 CODE Arrays, Structures and Storage Allocation 57
- 10.1 CODE Arrays: Representation 57
- 10.2 Storage Allocation 57
- 10.3 Some Useful Predeclared Functions 58
- 10.4 Structure Allocation 58
- 10.5 File c2_globtypes.h 59

11.0 Translating, Running, and Measuring CODE Programs 60
- 11.1 Sequent Symmetry Translation 61

12.0 Input/Output in CODE 62
- 12.1 Sequent Symmetry I/O 62

13.0 Common CODE Conceptual and Usage Errors 63

14.0 Known Bugs and Limitations 66
